CEILING TILE OR SURFACE MOUNT

Blu Tile

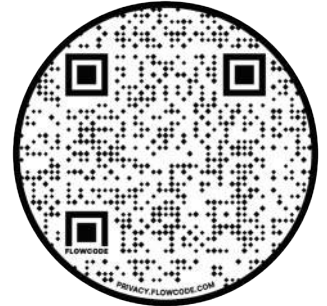

CASPR - Continuous Air & Surface Disinfection Products

CASPR is your Indoor Air Quality & Surface (IASQ) Solution
Safe + Effective + Reliable + Competitively Priced

CASPR Blu Tile is easy to install, has integral, internal fan that runs quietly and circulates air; no duct installation required, no filters to replace while providing continuous no-touch air and surfaces.

CASPR is more than an air filtration system - It is a continuous air and surface disinfection and pathogen reduction system.

CASPR's technology uses a proprietary Natural Catalytic Converter (NCC) process to naturally extract oxygen and moisture from the ambient air producing and safely delivering continuous trace levels of hydrogen peroxide (H₂O₂) to disinfect indoor spaces. The result is an automated and continuous reduction of air and surface viruses, mold and bacteria in a way that is safe for use in spaces occupied with people and pets, and with no need to modify existing custodial processes.
