Kwik Guard

By BlueWater Manufacturing

Features:

- Exceeds OSHA and BOCA Standards
- Low cost per foot
- Tough Powder Coated Pipe in Safety Yellow
- Easily assembled with just a hex key
- 1 1/4" pipe - Stocked

Options:

- Various Colors
- Galvanized Pipe

Uses:

- Chiller Units
- HVAC Units
- Tanks
- Platforms
- Other equipment

Color Options:

- PC Yellow rails/ Galv Fittings
- Galv rails/ Fittings
- Custom colors for add cost and extra lead time

KwikGuard Modular Handrail Safety System

Kwik Guard is a custom-designed fall protection guard rail system for chillers, fuel storage tanks, ovens, paint booths, and other special applications. The Kwik Guard system is designed to provide OSHA-complaint fall protection without penetrating the tank or unit on which it is installed. Can be attached to concrete base or to the structural supports. Testing by a third-party engineering firm has confirmed this system complies with all applicable OSHA regulations.

The system is mounted with standard anchor bolts and is assembled using Kwik Fit structural pipe fittings that require a hex key to tighten the fitting connections. Standard self-closing safety gates can be easily mounted to rail sections to provide access through the rail.
