Kwik-Rail Safety Railing is an economically priced handrail system that is easily assembled with just a hex key. The system creates a tough and durable barrier in just minutes with no welding. The cross members come standard in 6' lengths that give you a lower cost per foot. If 6' is too long for your needs, simply cut the cross members to size. The railing is 42" tall. The system comes in kit forms and customs gates can be manufactured to meet specific needs. The kits can be secured by off-the-shelf anchoring bolts. Please inquire Dakota Safety about our full range of structural pipe fittings.
